

1. Travel Consulting Company

Assumptions:

1. A region may have no team or more than 1 teams. Every team and consultant has at least one assignment.
2. Each call is handled by one consultant for one customer and covers one topic. callType is either newTravel or existingReservation. New travel calls have no reservationId while existing-reservation calls need a reservationId, which is under the same customer.
3. New travel or existing reservations are identified by callType. A reservation has one customer. No extra reservation, consultant or customer details were specified, so only their identifiers and required foreign keys are included.
4. Both rows in consultant_team form a composite primary key.

2. DVD Rental Company

Assumptions:

1. Each branch has at least one staff member and at least one stocked movie.
2. Each branch has only one manager. managerStaffNumber references staff.staffNumber. That staff member must work at the same branch and have the manager position. A staff member manages zero or one branch.
3. membership has composite PK (memberNumber, branchNumber). registeredDate belongs to that pair. Each member has at least one branch membership.
4. branch_movie has composite PK (branchNumber, imdbCode) and one current dailyRentalCost for all copies of that title at that branch. Each listed branch title has at least one DVD copy. A catalog movie may have no branch stock.
5. dvd FK1 is the composite FK (branchNumber, imdbCode) to branch_movie. The two rental FK is the composite FK (memberNumber, branchNumber) to membership and dvdNumber to dvd.
